Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. Except for nursing homes, the findings above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

Continued From page 1

verification of an intraocular lens to be matched and then implanted using Patient 1's identifiers. Patient 1 underwent cataract surgery and when his lens was removed, the lens was replaced with one which had the correct measurements for another patient. A second surgery was required to remove the wrong lens. This resulted in the increased risk for complications related to surgery, including infection, prolonged time for healing of the eye, and patient discomfort.

THE VIOLATION OF LICENSING REQUIREMENTS CONSTITUTED AN IMMEDIATE JEOPARDY (IJ) WITHIN THE MEANING OF HEALTH AND SAFETY CODE SECTION 1280.1 IN THAT IT CAUSED, OR WAS LIKELY TO CAUSE SERIOUS INJURY OR DEATH TO THE PATIENT, WHEN MEDICAL AND NURSING STAFF FAILED TO ENSURE PRE-SURGICAL VERIFICATION THAT THE CORRECT LENS INPLANT WAS TO BE USED. THIS VIOLATION PLACED THE PATIENT AT RISK FROM HAVING TO HAVE A SECOND SURGERY TO INPLANT THE CORRECT INTRAOCCULAR LENS.

Findings: See Tag E294

E 294 T22 DIV5 CH1 ART3-70215(b) Planning and Implementing Patient Care

(b) The planning and delivery of patient care shall reflect all elements of the nursing process: assessment, nursing diagnosis,

An additional label with the patient identifiers had been adhered to the A-Scan prior to placing it in Patient 1's Pre-Operative Packet. In preparing Patient 1's history and physical, the surgeon referenced the A-scan in Patient 1's packet, which actually belonged to Patient 2. During the time-out (per Universal Precautions policy) in preparation for Patient 1's procedure, the circulating nurse immediately communicated her concerns about conflicting identifiers on the A-scan and attempted to verify the scan accuracy. The lens implant calculations were verified against the H&P. The calculations from the H&P matched the scan. The calculations documented on the H&P were incorrect because they were calculated using the wrong a-Scan.

Actions

It was determined that labels are not needed, as the patient identifiers are electronically documented on the diagnostic test results at the time the test is performed.

Continued From page 3

During an onsite investigation on /09, a review of Patient 1's record revealed the patient was admitted on /09 for surgical removal of a cataract lens of the left eye and implantation of an intraocular lens. The admission information for Patient 1 revealed the next of kin was Patient 2

A review of the ophthalmology department intraocular lens worksheet, dated /09, revealed that it included both Patient 1 and Patient 2's names for the exam. The worksheet was prepared preoperatively and recorded the measurements to ensure the correct lens was implanted in the eye. Patient 1's name was affixed to the upper right corner of the exam by a preprinted sticker. The sticker had Patient 1's name and the date of surgery, /09. Patient 2's name was printed on the worksheet and included Patient 2's medical record number. The discovery of two different names on the document which included the size of lens to implant was discovered during Patient 1's surgery on /09.

A review of the facility policy, titled Universal Protocol. Patient, Procedure and Site Marking, Briefings and Final Verification Policy, dated /09, included the following:
iii. Policy Statement

The pre-procedural verification was an ongoing process of information gathering and

Responsible Party:

Ophthalmology Manager,
Special Procedures Manager,
Chief of Special Procedures

Monitoring

1. Audit monthly a random sample of pre operative packets assembled in out patient Ophthalmology Clinic to ensure that the secondary label is not used and packets are error-free.
2. Audit monthly a random sample of A-Scans performed on the Ellex 3 to determine that all are uploaded into OIS.

Oct.
31,
2009

The threshold of 95% was reached for audits completed in June, July, August, September, and October 2009. Reports were made monthly to Risk Management, and quarterly to Performance Improvement Committee. The measure of success was achieved and monitoring was discontinued.

	<p>Continued From page 4</p> <p>verification which began when the decision to perform a procedure was made, continuing through all settings and interventions involved in the pre-procedure preparation of the patient, up to and including the time-out just before the start of the procedure. The purpose of the pre-procedure verification process was to make sure that "all relevant documents, blood and related information, implants or special supplies/equipment are available prior to the start of the procedure, and matched to the patient's identifiers."</p> <p>During an interview on 5/12/09 at 10:15 a.m., the Vision Service Assistant stated patient records are prepared in the ophthalmology clinic before surgery. The preprinted stickers are put in the upper right corner of the page to more easily see the name of the patient. The Vision Service Assistant stated the record goes through many hands before getting to surgery. The assistant did not know how the error occurred.</p> <p>During an interview on 5/13/09 at 11:30 a.m., the Circulating Nurse stated the two names on the document were discovered during "time out", a mandatory period of time before surgery during which the surgical team reviewed the patient, procedure, site of operation and lens required. The presence of two names on the document was seen as a clerical error and the physician proceeded with the left eye lens implant on Patient 1</p>
