

# ENVIRONMENTAL HEALTH GLOSSARY

and

# ENVIRONMENTAL HEALTH FLASHCARDS

by

Thomas H. Hatfield, REHS, DrPH

These two Kindle books (published by Amazon) feature concise definitions for over 1,200 terms in environmental health. Add to that its internal searchability and hyperlinks to external web sites, and this reference adds to the number of exam study tools available to those who are preparing for the CA-REHS exam.

Dr. Tom Hatfield is Professor and former Chair of Environmental and Occupational Health at the California State University, Northridge, and Adjunct Professor of Environmental Health Science at UCLA. He helped set academic and professional standards as Chair of the National Environmental Health Science and Protection Accreditation Council, and has over 30 years of experience as both a professor and active registered environmental health specialist, having worked for private organizations and public agencies at the local, regional, state, national, and international levels.

The “Environmental Health Glossary” features a “layered approach” to enhance understanding:

1. Terms are defined in the traditional form of a glossary;
2. Key words are emphasized in bold font;
3. Grouping of terms are in subject order (rather than alphabetical), so that adjacent definitions can enhance understanding of a given term;
4. Hyperlinks are underlined, allowing for follow-up at web sites – this builds on the Wikipedia capacity of Kindles by adding links for multi-word terms, and links to reputable web sites.

For those who prefer the terms in flashcard form, “Environmental Health Flashcards” is available for separate purchase – it has **IDENTICAL** content to the Environmental Health Glossary, but is presented in flashcard form.

The price of this book (\$4.99) and its hyperlink capability and website connectivity offers an innovative approach for better understanding of terminology in environmental health.
