

## Pre- and Post-Training Questions

### Module 3: Setting Up a Cart

**Facilitator notes:** Use the pre- and post-training questions below to gauge knowledge before and after each course. Note that this will add an additional 5-10 minutes before and after each module. You may alternatively use these questions for an optional post-training discussion. Results of these tests can help facilitators determine which infection prevention and control concepts were well-understood during the training session and which need additional time or training. To reduce potential test anxiety, let your staff know that these will not be graded. We suggest printing a copy of the pre- and post-training tests for each participant. Answers may be collected anonymously if preferred. Participants should have access to the correct answers after the tests are administered; facilitators may decide to review the questions and answers as a group.

### Module 3: Setting Up a Cart Answer Key

Answers are highlighted in yellow.

1. Which of the following infection prevention items *should* you always have on your cart?
  - a. Alcohol-based hand rub (ABHR)
